

Lorenzo Fontolan, PhD

Computational Neuroscientist

lorenzo.fontolan@gmail.com | +1-571-376-8253

JANELIA RESEARCH CAMPUS - 19700 Helix Dr, Ashburn, VA 20147

Summary

I am a Computational Neuroscientist with a background in Physics and significant experience in **mathematical and computational modeling, machine learning, problem solving and data analysis**. Currently I am a research scientist in the lab of Dr. Sandro Romani where, in collaboration with the experimental lab of Dr. Karel Svoboda, I investigated the brain mechanisms behind **decision-making and motor preparation**. I am interested in understanding the **neural basis and the evolution of intelligent behavior** in animals and humans, hoping that a better understanding of ourselves will lead to a more compassionate and just society.

Skills

Programming Skills: *Python, Matlab, C, XPP*

Other: *Dynamical Systems, Neuroscience, Statistics, Machine Learning, Statistical Physics, Neural networks, Theano, Tensorflow.*

Research experience

Janelia Research Campus – HHMI | Research Scientist [October 2021-present]

Janelia Research Campus – HHMI | Research Associate [2015 – September 2021]

- Built **computational models** of short-term memory, challenged long-standing hypotheses on the role of slow neural timescales during decision-making, and established a causal link between the persistent firing of cortical neurons and **short-term memory** (published in **Nature**)
- Trained **artificial neural networks** to reveal how information is transmitted between brain areas. Uncovered the neural mechanisms that allow short-term memories to persist and repel incoming interferences (published in **Nature Neuroscience**)

I presented my work at several leading conferences in the Neuroscience field (Sfn, Cosyne, HHMI) and organized introductory courses to Computational Neuroscience at Janelia Research Campus.

ENS Paris – University of Geneva | PhD in Neuroscience [2011 – 2015]

- Developed and tested a state-of-the-art **biophysical model** of speech perception in cortical circuits
- Analyzed **brain recordings** from human patients. Combining both the modelling and the data analysis approaches enabled us to identify the role of brain rhythms in **speech perception**.
- Carried out the **mathematical analysis** of a simplified spiking neuron model

Published in: **Nature Communications, eLife, Trends in Neuroscience and Journal of Mathematical Neuroscience.**

Center for Theoretical Neuroscience – Columbia University | Exchange student [2009 – 2010]

- Employed computational and mathematical tools to study how to efficiently store and retrieve **correlated memories** in Hopfield networks (M.Sc. thesis work: "*Learning of hierarchical memories with binary synapses*")
-

PhD in Neuroscience (2011 - 2015, University of Geneva)

Advisors: Prof. Anne-Lise Giraud and Prof. Boris Gutkin - Graduation Mark: 6/6

Education**M. Sc. in Physics (2008-2011, La Sapienza University of Rome)**

Concentration: Dynamical systems and statistical physics. Advisors: Prof. Stefano Fusi (Columbia University of New York), Prof. Enzo Marinari - Graduation Mark: 110/110 cum laude

B. Sc. in Physics (2004-2007, La Sapienza University of Rome)

Concentration: Condensed matter physics. Graduation Mark: 109/110

**Selected
Publications**

1. Neural algorithms and circuits for motor planning. **Annu. Rev. Neurosci.** (in press)
 2. Attractor dynamics gate cortical information flow during decision-making. **Nat. Neurosci.** (2021)
 3. Discrete attractor dynamics underlying selective persistent activity. **Nature** (2019)
 4. Neural cross-frequency coupling: from mechanism to function. **Trends. Neurosci.** (2015)
 5. Speech encoding by coupled cortical theta and gamma oscillations. **eLife** (2015)
 6. The contribution of frequency-specific activity to hierarchical information processing in the human auditory cortex. **Nat. Commun.** (2014)
 7. Analytical insights on theta-gamma coupled neural oscillators. **J. Math. Neurosci.** (2013)
-

Talks and awards

Talks and seminars: NYU, Brandeis, ENS Paris, Univ. of Marseille, IDIBAPS Barcelona, Univ. of Geneva, Univ. of Padua, NJIT, Society for Neuroscience Annual Meeting Washington DC, ICMN France, Bernstein symposium

Best PhD thesis in Neuroscience, Amicitia Excellence Prize 2015 (10,000 CHF)

**Teaching,
mentoring &
academic
services**

2021	Organizer , Bernstein symposium "Control mechanisms for contextual computations and behavior"
2021	Mentor , Neuromatch academy 2021
2020	Content Reviewer , Neuromatch academy 2020
2019	Organizer and lecturer , Mathematical Methods for Neuroscience and Machine Learning (Janelia Research Campus)
2017 – 2019	Lecturer , Introduction to Computational Neuroscience Undergraduate Seminar (Janelia Research Campus)
2018	Invited Lecturer , General Philosophy course (Catholic University of America).
2017	Attendee , Scientists Teaching Science course (NIH)
2017	Co-creator , exhibition on AI and Neuroscience "WHAT? Machines that learn"
2016	Attendee , Methods in computational neuroscience course, MBL, Woods Hole, MA.
2015	Mentor and Thesis Supervisor , "Isomorphism of Hopfield nets and Ising model", B. Sc. in Physics, La Sapienza University of Rome
2006 – 2009	Tutor , college and high school physics and mathematics
Reviewer for:	<i>Nat. Neurosci., Neuron, PNAS, Plos Comp. Biol., Cortex, Commun. Biol., Comput. Biol. Med., Lang., Cogn. Neurosci.</i>

Languages

Italian, English, French and Spanish.
